

CREATING AN ACCOUNT

For any online capable features and functionality, Follow the prompts on the app to create an account.

Step #1

Push "Sign Up" and enter your password

Step #2

Retrieve code from your email

Step #3

Enter your password for the account.

Pairing to a local WIFI Network

The following items must be considered prior to starting this process:

- 1 The location of the Trimlight Controller must have a very strong signal to the local wifi network. Check the signal bars on the device at the location of the controller to ensure it's strength. IF A POOR SIGNAL EXISTS at the controller location, there are 2 options;
 - a Use a Wifi repeater on your network between the router and the Trimlight Controller.
 - b Choose to operate the controller on the BLUE light setting by not connecting it to the local network.
- 2 If you have a mesh network or multiple access points on your network the controller will be connected to the closest one only. When the app is establishing a connection to each connected controller, the closer in proximity the mobile device is to the correct access point, the faster the connection will be made.

Once this process has been completed, the user will no longer need to use the Trimlight wifi signal to connect to the controllers. These steps are one way for connecting:

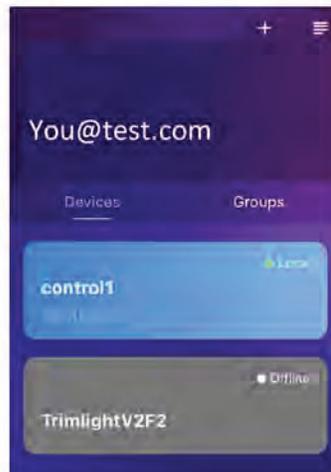

Choosing option B will not allow the controller to receive periodic updates, Use Grouping feature, or Remote Access

Step #1

Ensure the device is connected to the local WIFI router network with adequate internet connectivity.

Step #2

Press the "ADD DEVICE" button in the upper right hand corner. It is shown as a "+".

Step #3

Follow the prompts on the device to properly pair the controller to the internet. It is recommended to start with the MANUAL MODE.
